

# DIGITAL INTELLIGENCE

Uncover digital exposure across people, brands, and infrastructure - before it puts your business at risk.

## > Datasheet

### Key challenges

#### > Is your digital footprint exposing you to risk?

Publicly available information about domains, staff, and systems can be exploited by competitors or threat actors.

#### > Could a data leak or impersonation damage your reputation?

Even minor exposures can escalate into major financial or reputational damage.

#### > Do you have full visibility of your online exposure?

Without digital intelligence, blind spots across infrastructure and people remain unchecked.

## OSINT

### Advantage

Organizations using intelligence-led methods detect exposures and threats earlier, significantly reducing breach likelihood.

(Source: The Art of Open Source Intelligence, 2024)

*Your digital footprint extends far beyond your website - it includes domain names, infrastructure, employee data, and online activity. When left unmonitored, these assets can expose your organization to reputational, financial, and operational risks.*

# Our solution

Ilkari Digital Intelligence uncovers hidden risks across your people, brand, and infrastructure before they become threats. Using advanced Open-Source Intelligence (OSINT) techniques, we identify vulnerabilities - from exposed domains and leaked data to impersonation threats - giving you a proactive edge against competitors and cyber threats.

## Key benefits

### Pre-empt attacks

Identify exposed domains, data, and digital weak points before they're exploited.

### Reveal hidden risks

Gain visibility across people, infrastructure, and brand that traditional tools miss.

### Turn exposure into advantage

Transform visibility of your digital footprint into insight that reduces risk and builds resilience.

### Future-proof your digital presence

Prevent impersonation, data leaks, and reputational damage by addressing risks early.

## Use cases

### Corporate digital footprint

Assess hidden digital exposure across your organisation, identify misconfigured domains, shadow assets, privacy gaps and security risks. Ideal for M&A due diligence or internal risk reviews.

### Candidate digital footprint review

Evaluate public digital presence of prospective hires to uncover red flags, verify professional credibility, and reduce recruitment risk.

## Protect high-profile personnel

Detect threats to executives, key team members, and owners, including doxxing, impersonation, data leaks and targeted misinformation.

## How it works

01

### Get started

Begin with a scoping call to define objectives and requirements.

02

### Investigation

Our experts perform discreet OSINT investigations across domains, social media, dark web, and media sources.

03

### Report delivery

Receive a detailed report covering corporate structures, digital footprint, leaked credentials, and reputational risk.

04

### Evaluation call

Discuss key findings and next steps in a review call. All data is handled confidentially and deleted within 5 days unless otherwise requested.

## Take action

Contact our team to uncover hidden risks, protect your brand, and gain the insight you need to stay ahead
